

Construction Technology Report Reveals Need for Improved Integrations

The [ABC 2023 Tech Report](#) released last month by Associated Builders and Contractors (ABC) revealed the urgent need for enhanced integration of project management and accounting data within the construction industry.

The research, conducted by the Dodge Construction Network, showed that the top 5 data-related challenges contractors face are all integration-related and include data migration; integrating solutions in the technology stack; data exchange; poor integration among financial, CRM, and ERP software; and lack of internal ability to develop integrations.

If you're like the 70% of Tech Report respondents who cited investing in improved integrations being of critical importance, you should know that Morpheus's integration platform offers a highly configurable and scalable solution that enables seamless connections between disparate systems. For details on how we can help you integrate critical data...
